

Intro to Programming with Python

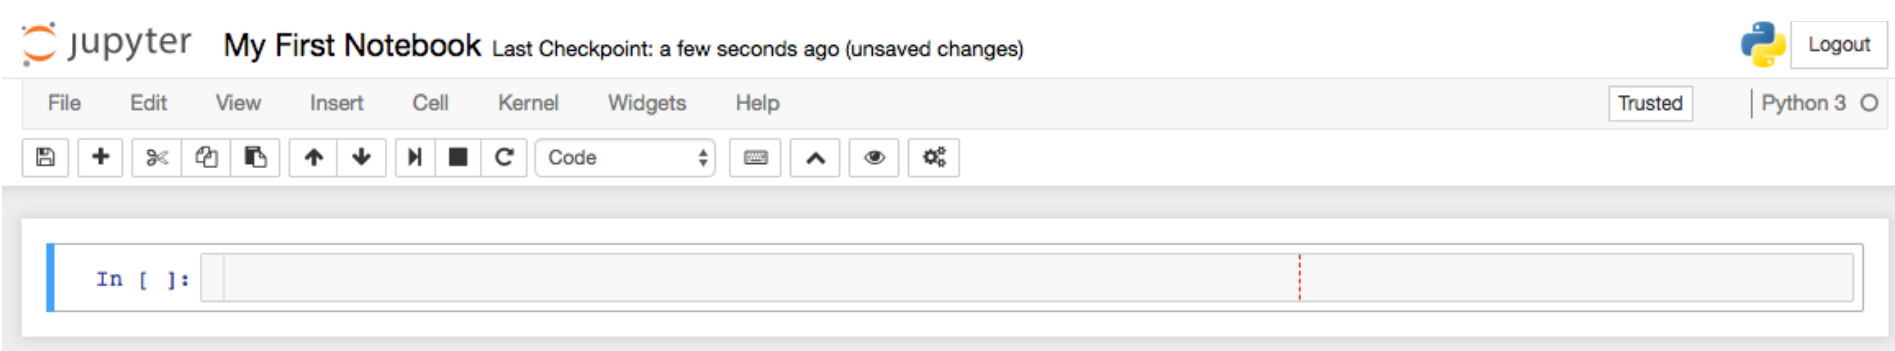

Jupyter Basics

Jupyter Basics

- In this lecture we will learn:
 - What a cell in a notebook is
 - How to switch from edit mode to command mode
 - How to create a cell
 - How to delete a cell
 - How to execute a cell

Jupyter Basics

- Open the notebook we created in the last lecture:

- This is a cell
- Click on it once to highlight it
- Press 'enter' to go into edit mode. There will now be a blinking cursor in the cell and you can type in it

Jupyter Basics

- Now hit 'esc' to exit edit mode. You are now in command mode
- Type 'a' to create a cell above the one currently selected
- Type 'b' to create a cell below the one currently selected
- Type 'd' twice to delete the cell you have currently selected
- Press control-enter to execute a cell
- Let's watch me do this in real time, feel free to follow along

Jupyter Basics

SUCCESS!
