Week 4 Assignment Handout

For this week the assignment is straightforward. Please create a function called 'makeMap', that will do the following:
1. Create a map of the United States just like we did in the class lectures.
2. use the scatter method to plot dots over Chicago, New York, and Los Angeles.

Please create the function in a file called last_first_week4.py. So, for example, I would create a file 'henry_william_week4.py'. I would define the function in the following way:

def makeMap():

    # put code here to make map
    # put code here to plot scatter data

    return
